# How to cancel "Reagent Expired" alarm

Sometimes when reagent is out of the expired date, the instrument will ask for replacing reagent while you want to test a sample. If the reagent performance is good enough and the user still want to continue to use it, you can follow the below steps:

1. Enter Management => Setup => Reagent menu.

2. Select "One key elimination" to activate the function and click OK to save.

3. Then we can click the alarm area, on the pop-up dialog have one key clear alarm function. Click clear to cancel the alarm and close the dialog box, then we can continue use the reagent.
